Upcoming Projects

As MGCC continues to maintain, improve and add new facilities, it is important to record the achievements and level of investment. As a club we will continually update this webpage as new projects are completed.

Outdoor Car Park Canopy

The Outdoor Car Park Canopy project will provide covered protection for members and guests using the Club's outdoor parking areas. The canopy will help shield vehicles and users from direct sunlight creating a more comfortable experience at Macau Golf and Country Club.

Member Tap-in System

The Member Check-in System will modernise the arrival and registration process for members. The system is expected to improve operational efficiency by allowing faster check-in, better tracking of member usage of club facilities, and more accurate management of reservations and accounts.

This project will enhance service delivery by reducing manual administration, improving data accuracy, and creating a smoother member experience from arrival to play or facility use.

Seaview Terrace Renovation

The renovated Seaview Terrace will provide weather protection for members and guests using one of the Club's most attractive outdoor areas. By improving comfort and usability, it will allow the terrace to be enjoyed more consistently throughout the year, including during periods of strong sun, light rain, or high humidity.

Club Fitting Room

The Club Fitting Room project will create a dedicated space for professional golf club fitting and equipment assessment. The facility will allow members to receive tailored recommendations on clubs, shafts, grips, lofts, lies, and set composition, helping golfers improve performance through equipment that is better suited to their swing and playing style.
